

CUT FLOWERS

EUROPE - MIDDLE EAST - AFRICA

2024 - 2025

TAKII SEED

Dear reader,

We are thrilled to unveil the 2024/25 cut flower catalogue from Takii Europe, a proud member of the Takii family, globally recognized for top-quality breeding in both flowers and vegetables. Our commitment to reliability, quality, and innovation is evident from our base in De Kwakel, The Netherlands. Serving regions across Europe, the Middle East, Africa, and Central Asia, Takii Europe provides superior seed varieties, all stemming from our dedicated breeding stations and production sites around the world.

This catalogue showcases our latest cut flower assortment, thoughtfully developed to cater to diverse market needs and climate conditions. Notable highlights include the introduction of new colour varieties to the Lisianthus 'Corelli' series and the debut of the 'Legend Double' Antirrhinum series. All new additions have been bred to provide distributors, young plant raisers and growers with valuable opportunities to expand their offerings and effectively respond to evolving market demands.

To stay updated with our continuously expanding assortment, please visit our website at www.takii.eu. For more details or assistance, feel free to contact a Takii representative.

Thank you for considering Takii Europe. We eagerly anticipate the opportunity to connect with you and assist in selecting the varieties that best suit your market's needs.

With respect,

The Takii Europe Team

Crane F1

Brassica oleracea

Cold-climate excellence, robust visual appeal

Germination temperature
20-25°C

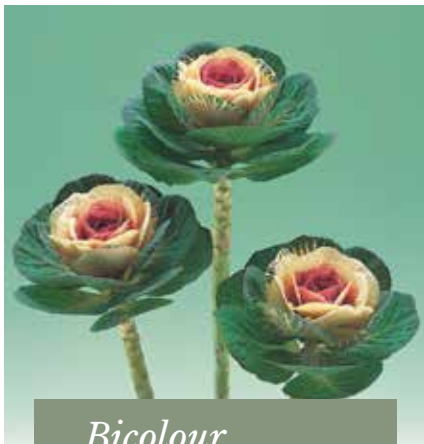

Days to germinate
4-6 days

Stem length
60-90 cm

The Crane series excels in cold climates with uniform, upright growth and compact flower heads that allow size adjustment via spacing.

Known for long vase life and robust visual appeal, it features round leaves in a range of colours.

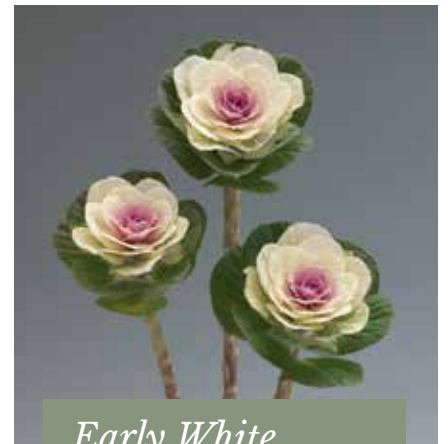

Series members are Crane Feather with unique feathered leaves and Crane Ruffle with elegant ruffled leaves, offering diverse textures for winter bouquets.

Flare F1

Brassica oleracea

Early maturation, uniformity and effortless production

Germination temperature
20-25°C

Days to germinate
4-6 days

Stem height
60-90 cm

Flare is a top choice for growers seeking early maturation, exceptional uniformity and effortless production of tall stems.

Flare's wavy leaves feature a gentle ruffle along their edges, adding spark to its flower head.

Flare White is well-suited for dyeing.

New

Optimo

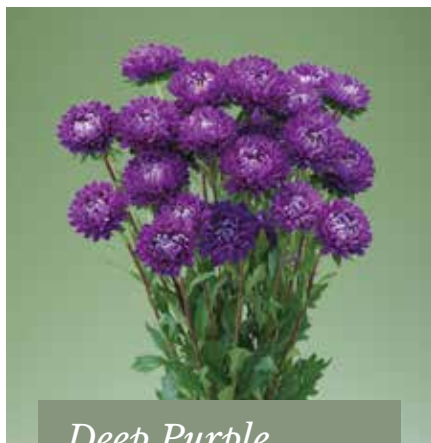

Callisthephus chinensis

Vibrant hues and substantial blooms, along with reduced basal branching and top flowering

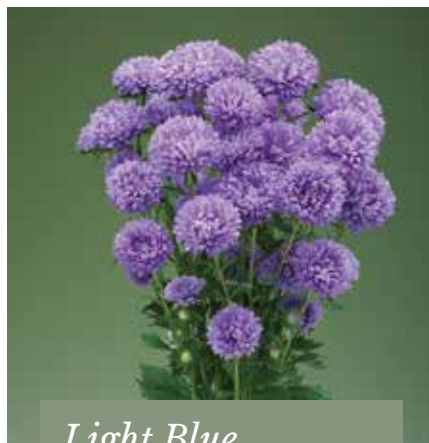

Germination temperature
20-25°C

Days to germinate
6-8 days

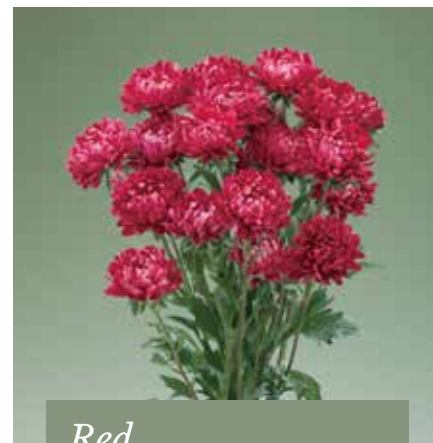

Stem height

Zanzibar
FSZB95

Aurora F1

Delphinium elatum

Sturdy stems, tight flowers, small leaves; ideal as cut flower and container plant

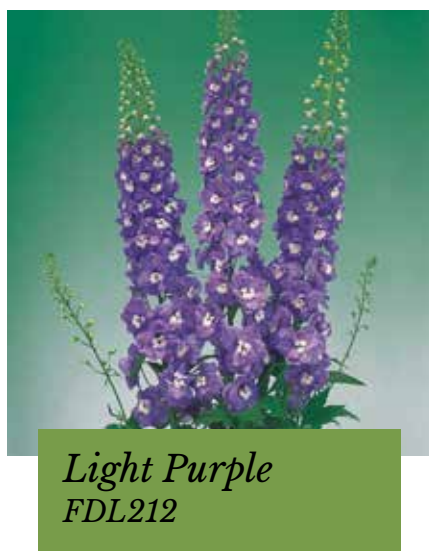

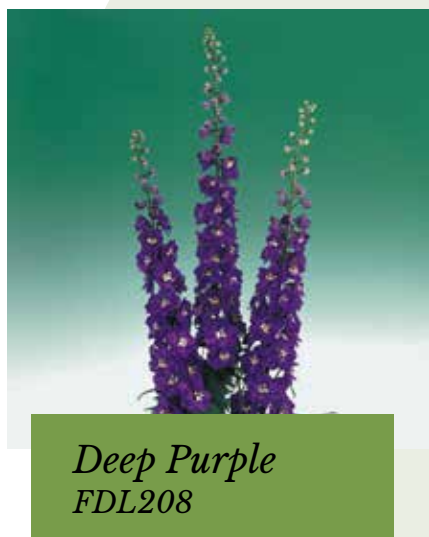

Germination temperature
15-20°C - *Dark required*

Days to germinate
10-12 days

Stem length
90-120 cm

Aurora distinguishes itself with its
uniformity and quality.

The stems are notably sturdy, complemented by
relatively small leaves, and tightly packed flowers,
making them perfect for cut flower arrangements.

Variety comparison among the Aurora F1 Series

Variety	Flower Size		Plant Height	
	cm	inch		
Blue	5.5	2.2	C	Taller A
Deep Purple	5.5	2.2	A	
Lavender	6.0	2.5	C	
Light Blue	5.5	2.2	B	Shorter C
Light Purple	5.5	2.2	C	
White	6.0	2.5	C	

The above data is based on trials completed in Japan. Actual results depend on environmental conditions and local practices that may affect the variety's characteristics and performance.

Seed Storage

Store seeds under dry and low temperature (approx. 5°C/40°F) condition. Storing seeds at room temperature (above 18°C/46°F) may result in very low germination.

Tips for cultivation

- Warm temperatures and long day conditions induce flowering.
- Plug finish time is 5-6 weeks. During this time, optimal growing temperatures are 15-25°C/60-78°F.
- 2-3 Weeks after transplanting, the flowering stems will start to elongate.
- Short day conditions will induce rosetting.
- When plants have fewer than 5 true leaves, temperatures below approximately 15°C/60°F will also cause rosetting.
- Under short-day conditions, 4 hours of night interruption will help initiate and develop flowering.

Maintains a stable flower colour even in high-temperature conditions.

Excels as a cut flower, boasting an excellent vase life.

Jenny's Pearl

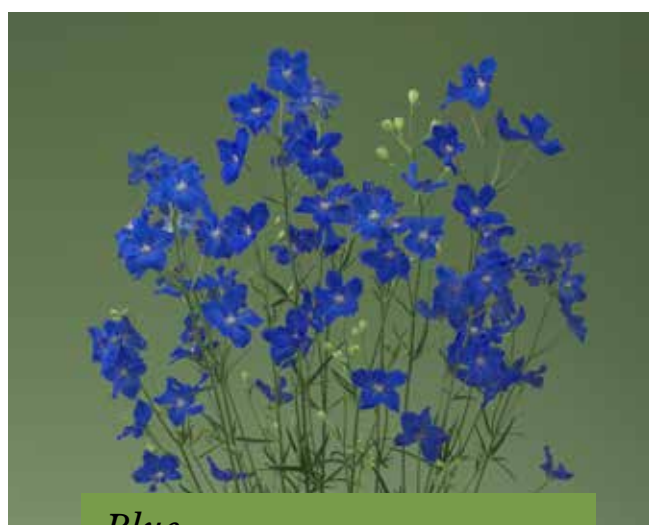

Delphinium grandiflorum

Delicate and playful flowers in branched sprays

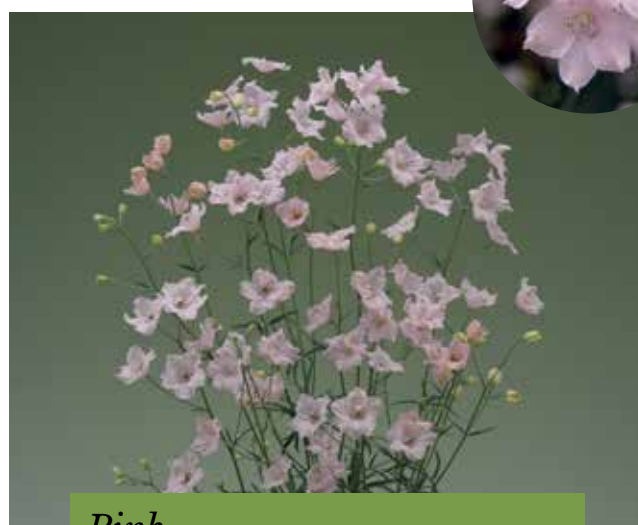

Germination temperature
15-20°C

Days to germinate
15-20 days

Unique, light green fruits adorned with soft spines, make it a standout feature in bouquets or as a single eye-catching display.

The Premier series stands out as an extra-early option, boasting a remarkably short crop time of approximately 45 to 55 days from sowing, coupled with outstanding uniformity.

As a non-branching F1 hybrid pollenless *Helianthus*, Premier offers high-quality flowers with petals densely arranged around the disk. This series showcases various yellow, gold, and orange hues in the classic sunflower head shape, including unique 'UP' versions where the flower head faces upwards towards the sky.

Sunrich[®] DMR F1

Helianthus annuus

A reliable and sustainable choice

Germination temperature
18-20°C

Days to germinate
4-6 days

Stem length
130-190 cm

Sunrich DMR provides growers with enhanced protection against downy mildew, ensuring peace of mind and higher yields. This breakthrough significantly reduces reliance on chemical treatments, leading to cost savings and environmental benefits.

Additionally, Sunrich DMR offers consistent performance and superb quality comparable to the classic Sunrich series or Sunrich Summer series. With its resistance to multiple strains of downy mildew, this variety represents a reliable and sustainable choice for growers seeking improved disease management in *Helianthus* production.

Disclaimer

1. Sunrich Orange DMR F1 highly restricts the growth and development of the above-stated pathogen and the damage they cause under normal pathogen pressure compared to susceptible varieties. It may, however, exhibit some disease symptoms or damage under heavy pathogen pressure.
2. New and/or atypical strains of the specified pathogen may overcome the resistance, sometimes completely.

Sunrich[®] F1

Helianthus annuus

Trusted by growers worldwide

Germination temperature
18-20°C

Days to germinate
4-6 days

Stem length
130-190

Sunrich varieties are renowned for their superb quality and leading status in the market, trusted by growers worldwide.

With pollenless, densely petaled, long-lasting blooms and sturdy stems, Sunrich sunflowers are favoured not only by growers but also by florists.

The classic Sunrich series, containing varieties in shades of orange, gold, and lemon, flowers in 70-120 days after sowing, depending on growing conditions and areas.

SUNRICH

Sunrich[®] Summer F1

Helianthus annuus

Tailored for spring to summer cultivation

Germination temperature
18-20°C

Days to germinate
4-6 days

Stem length
130-180 cm

The Sunrich Summer series offers growers a broad palette from lime to fiery orange, meeting market demands effectively.

Tailored for spring to summer cultivation, these varieties bloom up to 10 days earlier than classic Sunrich. It upholds Sunrich's superb quality and reliability.

Additionally, Sunrich Summer features a downy mildew resistant (DMR) option.

Full Sun Improved
FHMA13

Full Sun Imp F1 & Tiffany F1

Helianthus annuus

Florist-quality flowers

Germination temperature
18-20°C

Days to germinate
4-6 days

Stem length
130-190 cm

Full Sun Improved ensures ample stem length for growers even in short-day conditions, boasting golden-yellow, pollenless flowers. It adapts to varying conditions for extended cultivation beyond 55-100 days.

On the other hand, Tiffany offers versatile growth, suitable for spring and summer cultivation, with pollen-free, professional-grade flowers featuring round, densely placed orange petals and dark discs.

Tiffany
FHMA14

Marley
FHM461

Marley shows a distinctive bi-colour blend of mellow yellow and reddish-purple petals.

Additionally, with a long vase life and pollen-free flowers, Marley is a florist favourite. Flourishing in both spring and summer cultivation, it presents a good plant height and genetic colour variation, resulting in playful shade differences.

Compared to its counterpart Ziggy, Marley presents a softer yellow hue.

Marley F1 & Ziggy F1

Helianthus annuus

Bicolour Sunflower

Germination temperature
18-20°C

Days to germinate
4-6 days

Stem length
130-180 cm

watch video

Ziggy adds vibrancy with its sunny yellow and brownish-red bi-colour petals. Under intense light, colours may deepen for added brightness.

With a long vase life and pollen-free flowers, Ziggy is a florist favourite. Flourishing in spring and summer cultivation, it shows less side shooting and slightly later flowering than Marley, which boasts a mellower appearance.

Stem length
70-90 cm

New

Cupid 3 White F1
FRS735

Cupid presents captivating rose-shaped flowers adorned with an excellent number of petals, adding an enchanting allure to floral arrangements. With robust stems and sturdy flower necks, 'Cupid' ensures hassle-free transportation and handling, enhancing its market value.

Moreover, its remarkable ability to effortlessly attain sufficient stem length makes 'Cupid' an ideal choice for growers seeking reliable performance and quality.

2 Light Apricot
FRS673

Falda F1

Lisianthus grandiflorum

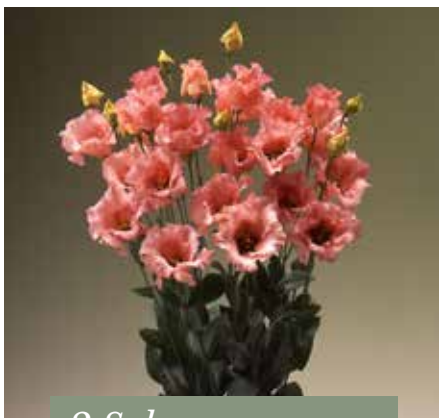

Light required | Flower earliness 2-3 | Flower size: Middle

Germination temperature
20-22°C

Days to germinate
20-25 days

Stem length
70-90 cm

With sturdy stems and thick petals, Falda ensures ease of handling and transportation.

2 Salmon
FRS672

3 White
FRS666

Jolly F1

Lisianthus grandiflorum

Profusion of petite blooms

Germination temperature
20-22°C *Light required*

Days to germinate
20-25 days

Stem length
70-90 cm

3 Pink
FRS806

Jolly presents a profusion of petite blooms with remarkable vase longevity. Its vigorous growth and sturdy stem and petals make it a resilient choice for growers seeking petite varieties.

Super Magic F1

Lisianthus grandiflorum

Vibrant, robust flowers

Germination temperature
20-22°C *Light required*

Days to germinate
20-25 days

Stem length
70-90 cm

Super Magic Lisianthus presents large-sized double-flowered blooms with a top flowering habit, defining it as a standout option for growers in search of vibrant, robust flowers.

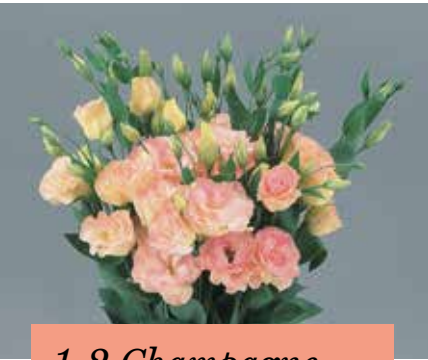

The wide colour assortment provides a complete range for growers, ensuring they have ample choices to meet market demands.

1-2 Apricot
FRS136

1-2 Capri Blue
Picotee - FRS139

1-2 Champagne
FRS131

1-2 Deep Blue
FRS137

1-2 Pure White
FRS135

1-2 Rose
FRS133

1-2 White
FRS138

1-2 Yellow
FRS134

Canneto White
FST336

Canneto stands out as an early flowering series, featuring lance-shaped sturdy stems and greyish-green leaves covered in fine hairs.

Dense flower spikes bear lush double flowers, adding to its allure in floral arrangements.

Canneto & Noble

Matthiola incana

Alluring floral arrangements

Germination temperature 18-21°C *Dark required*

Days to germinate 4-6 days

Stem length 80-100 cm

Cream Yellow
FST318

White
FST320

Extra-early flowering, producing breathtaking full double flowers with lush, dense blooms and fuzzy leaves.

Elevates mixed bouquets with its beautiful, airy grass, serving as an excellent filler due to its ample length.

Sparkling Fountain

Panicum capillare

Germination temperature
18-20°C

Days to germinate
4-6 days

Stem length
50-60 cm

Sparkling Fountain
FGRA21

Virgo

Tanacetum parthenium

Light required -Germination
temperature 15-20°C

Days to germinate
4-6 days

Stem length
50-60cm

A solid option for year-round cultivation under long-day conditions. Its uniform, button-type, fully double blooms form cushion-like heads on well-branched stems, making it an excellent choice for bouquets.

Virgo
FMTA22

FZN652

The Sun Zinnia, available in the Sunshine formula mix, offers a vibrant array of colours from the Sun series.

This mixture yields masses of large, fully double flowers that resemble dahlia-like blooms. Flowering just 60-70 days after sowing, these zinnias boast superb quality.

Sun F1

Zinnia elegans

Germination temperature 20-22°C	Days to germinate 5-7 days	Stem length 20-40 cm
